🚀 Available to start immediately

PROFESSIONAL SUMMARY

Backend .NET Developer with 3 years of hands-on experience, including internship experience, focused on C#/ASP.NET Core Web APIs, SQL Server and business logic. Hands-on experience with Repository Pattern, Dapper, Stored Procedures, data processing optimization and module-level API/database design. Contributed to Bizzone maintenance and feature development for Yamaha. Strongest areas are SQL-heavy business workflows, API development and backend performance optimization.

TECHNICAL SKILLS

DATABASE & SQL
SQL Server, T-SQL, Database Design, Query Optimization, Stored Procedures

BACKEND .NET
C#, ASP.NET Core Web API, OOP, Dapper, Entity Framework

ARCHITECTURE & INTEGRATION
RESTful API, Repository Pattern, Shared Libraries, FlexCel, Keycloak

WORKFLOW & TOOLS
Git, GitLab, CI/CD, Database Migration, Docker, Postman

PROFESSIONAL EXPERIENCE

UniCloud — Enterprise Software & Cloud Solutions

05/2024 – 04/10/2026 | Hanoi

Worked on 3 projects in parallel: Resident, UniHRM and Bizzone.

Project: Resident — Smart Urban & Resident Management System

05/2024 – 04/10/2026 | Hanoi

Role: Backend .NET & SQL Developer **Team size:** 8 members

Tech: C#, ASP.NET Core, SQL Server, Repository Pattern

- Designed a bulk vehicle import from Excel: processes 1,000+ records per batch, cutting processing time from 2 minutes to under 3 seconds and eliminating 95% of API-to-database round-trips through two-layer validation at the SQL level.
- Contributed to module-level technical design: defined API inputs/outputs, business flows, data structures and Stored Procedures before implementation.
- Developed vehicle card creation, data import and history lookup features in the resident management system.
- Worked with the Frontend team to complete end-to-end flows: reused the FE team's existing UI components and adapted them for the features I owned.

Project: UniHRM — Human Resource & Payroll Management System

05/2024 – 04/10/2026 | Hanoi

Role: Backend .NET & SQL Developer **Team size:** 10 members

Tech: C#, ASP.NET Core, SQL Server, Dapper, FlexCel

- Optimized social insurance adjustment processing: leveraged Dapper Multiple Result Sets to retrieve master lookup catalogs and reconciliation datasets in a single database query, reducing network load.
- Automated candidate onboarding and interview scheduling workflows: built business filtering logic by organizational unit, batch-grouping candidates to trigger automated push notifications.
- Developed insurance and payroll reporting modules: mapped complex SQL Server data to APIs; handled configurable grouping, dynamic fields and company payroll cycles.

PROFESSIONAL EXPERIENCE (CONTINUED)

Project: Bizzone & HR Portal — Enterprise HRM Portal

05/2024 – 04/10/2026 | Hanoi

> **Role:** Backend .NET & SQL Developer **Team size:** 12 members
>
> **Tech:** C#, ASP.NET Core, SQL Server, FlexCel, Keycloak

- Contributed to Bizzone maintenance, bug fixes and additional features for Yamaha; developed a shared SQL function for multilingual message resolution.
- Built Stored Procedures for multi-dimensional competency evaluation reports: processed survey criteria matrices and computed averages and percentile rankings by department and company-wide for 5,000+ employees on the Web Portal.
- Automated report generation with FlexCel: mapped database records into dynamic templates and exported survey reports to Excel and PDF.
- Maintained Core HRM employee lifecycle workflows: built the automated conversion of accepted candidates into official employees; handled maternity and training commitment rules; maintained Keycloak SSO integration.

EARLIER EXPERIENCE

UniCloud — Backend .NET Intern → Probation

Q4/2023 – 04/2024 | Hanoi

> **Role:** Backend .NET Intern (3-month internship) → Probationary Backend .NET Developer
>
> **Tech:** C#, ASP.NET Core, SQL Server

- Completed a 3-month Backend .NET internship, then continued as a probationary Backend .NET Developer before transitioning to the official developer role.
- Assisted with API implementation, business-logic changes, debugging and SQL-based data processing while transitioning into the Backend .NET Developer role.

TECHNICAL CONTRIBUTIONS & PRACTICES

- **SQL scope:** built and optimized around 80 stored procedures at UniCloud, focused on data queries and business logic.
- **Database versioning and schema synchronization:** set up deployments with database migration scripts, keeping schemas consistent across environments.
- **Shared library maintenance:** developed and optimized shared utility modules (string handling, standardized API response codes and system resource configuration).

EDUCATION

Ha Tay Community College

Graduated in 2024

Major in Information Technology
